

Assignment - 4 : Mock SSO Implementation

Task: Build a mock SSO flow with authorization-code exchange

Flow that I implemented:

1. Application will send request
2. IdP will ask to login
3. Generating of random access token
4. Validating it on Application which will display payload containing username and timestamp

Application	Identity Provider
Login with Service	Username: Enter any username
Ready to login	Password: Enter any password
	Login
	Waiting for login request...

After Tapping on Login With Service:

Application	Identity Provider
Login with Service	Username: Enter any username
Redirecting to Identity Provider...	Password: Enter any password
	Login
	Please enter your credentials and login

Add any random username and password(all will be accepted)

Application	Identity Provider
Login with Service	Username: saksshi
Redirecting to Identity Provider...	Password: *****
	Login
	Please enter your credentials and login

Token will be generated and then automatically added in our app(access token wont be edited as it is shared by service)

Application	Identity Provider
Login with Service Access token received from Identity Provider Access Token (Auto-filled): eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJ1c2VybmFtZSI6InNha3NzaGkiLCJ0aW1lc3RhbXAiOiIyMDI2LTAxLTE2VDIzOjA5OjA3KzA1OjMwIn0=.bW9ja19zaWduYXR1cmVfc2Frc3NoaQ== Validate	Username: Enter any username Password: Enter any password Login Authentication successfull! Token generated.

After clicking validate it validates and display payload which contains username and then timestamp when record was created

Application	Identity Provider
Login with Service Token validated successfully Access Token (Auto-filled): eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJ1c2VybmFtZSI6InNha3NzaGkiLCJ0aW1lc3RhbXAiOiIyMDI2LTAxLTE2VDIzOjA5OjA3KzA1OjMwIn0=.bW9ja19zaWduYXR1cmVfc2Frc3NoaQ== Validate Token Payload: { "username": "saksshi", "timestamp": "2026-01-16T23:09:07+05:30" }	Username: Enter any username Password: Enter any password Login Authentication successfull! Token generated.
